

Introduction

The CS Job Hub is a centralized platform created to streamline how employers connect with Virginia Tech computer science students. Designed to replace scattered communication methods and manual event coordination, the site allows employers to manage contacts, register for events, and send announcements in an all-in-one intuitive interface.

The main goal is to simplify the recruitment and engagement process while improving clarity, efficiency, and user experience for both company representatives and students.

Improved Login Page

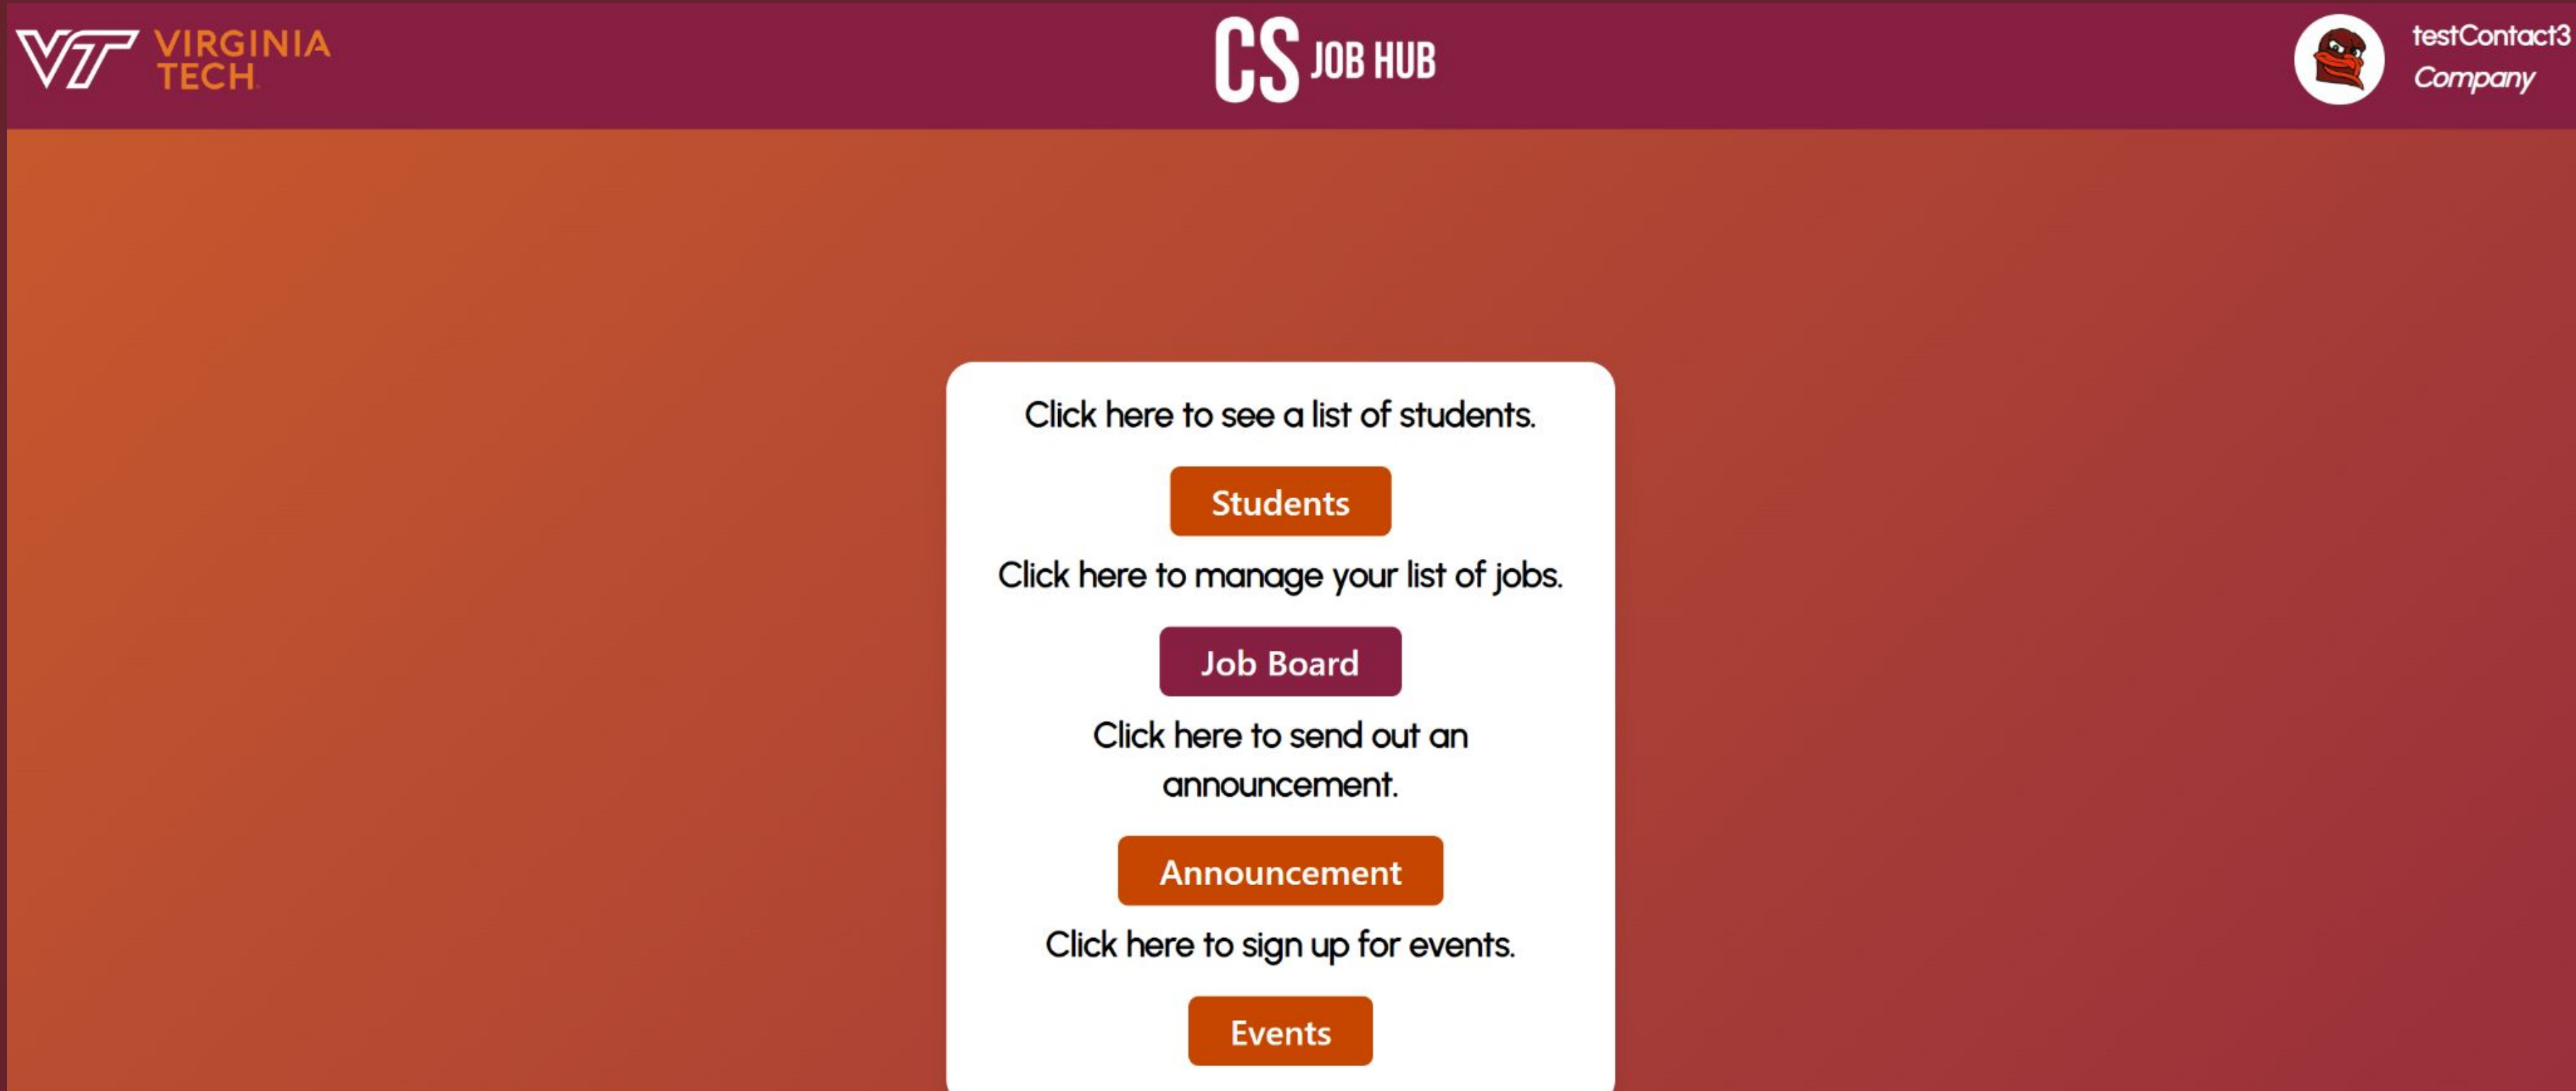

Methods/Approach

To build the CS Job Hub platform, we used a combination of Node.js, Express, and Flask, which allowed us to handle both frontend and backend development with flexibility and speed. These technologies enabled fast, secure, and scalable operations, making it easy to perform CRUD (Create, Read, Update, Delete) actions on user and contact data.

To work more efficiently, we split our team into three parts: one group focused on the frontend, another on the backend, and a third on password reset and login features. This helped us work faster and keep everything organized.

During user testing, participants reported fast load times, smooth navigation, and a seamless UI experience, highlighting the effectiveness of our chosen tech stack and team structure.

Capstone Class

The CS Job Hub platform has been updated with several new features to enhance employer interaction and student engagement:

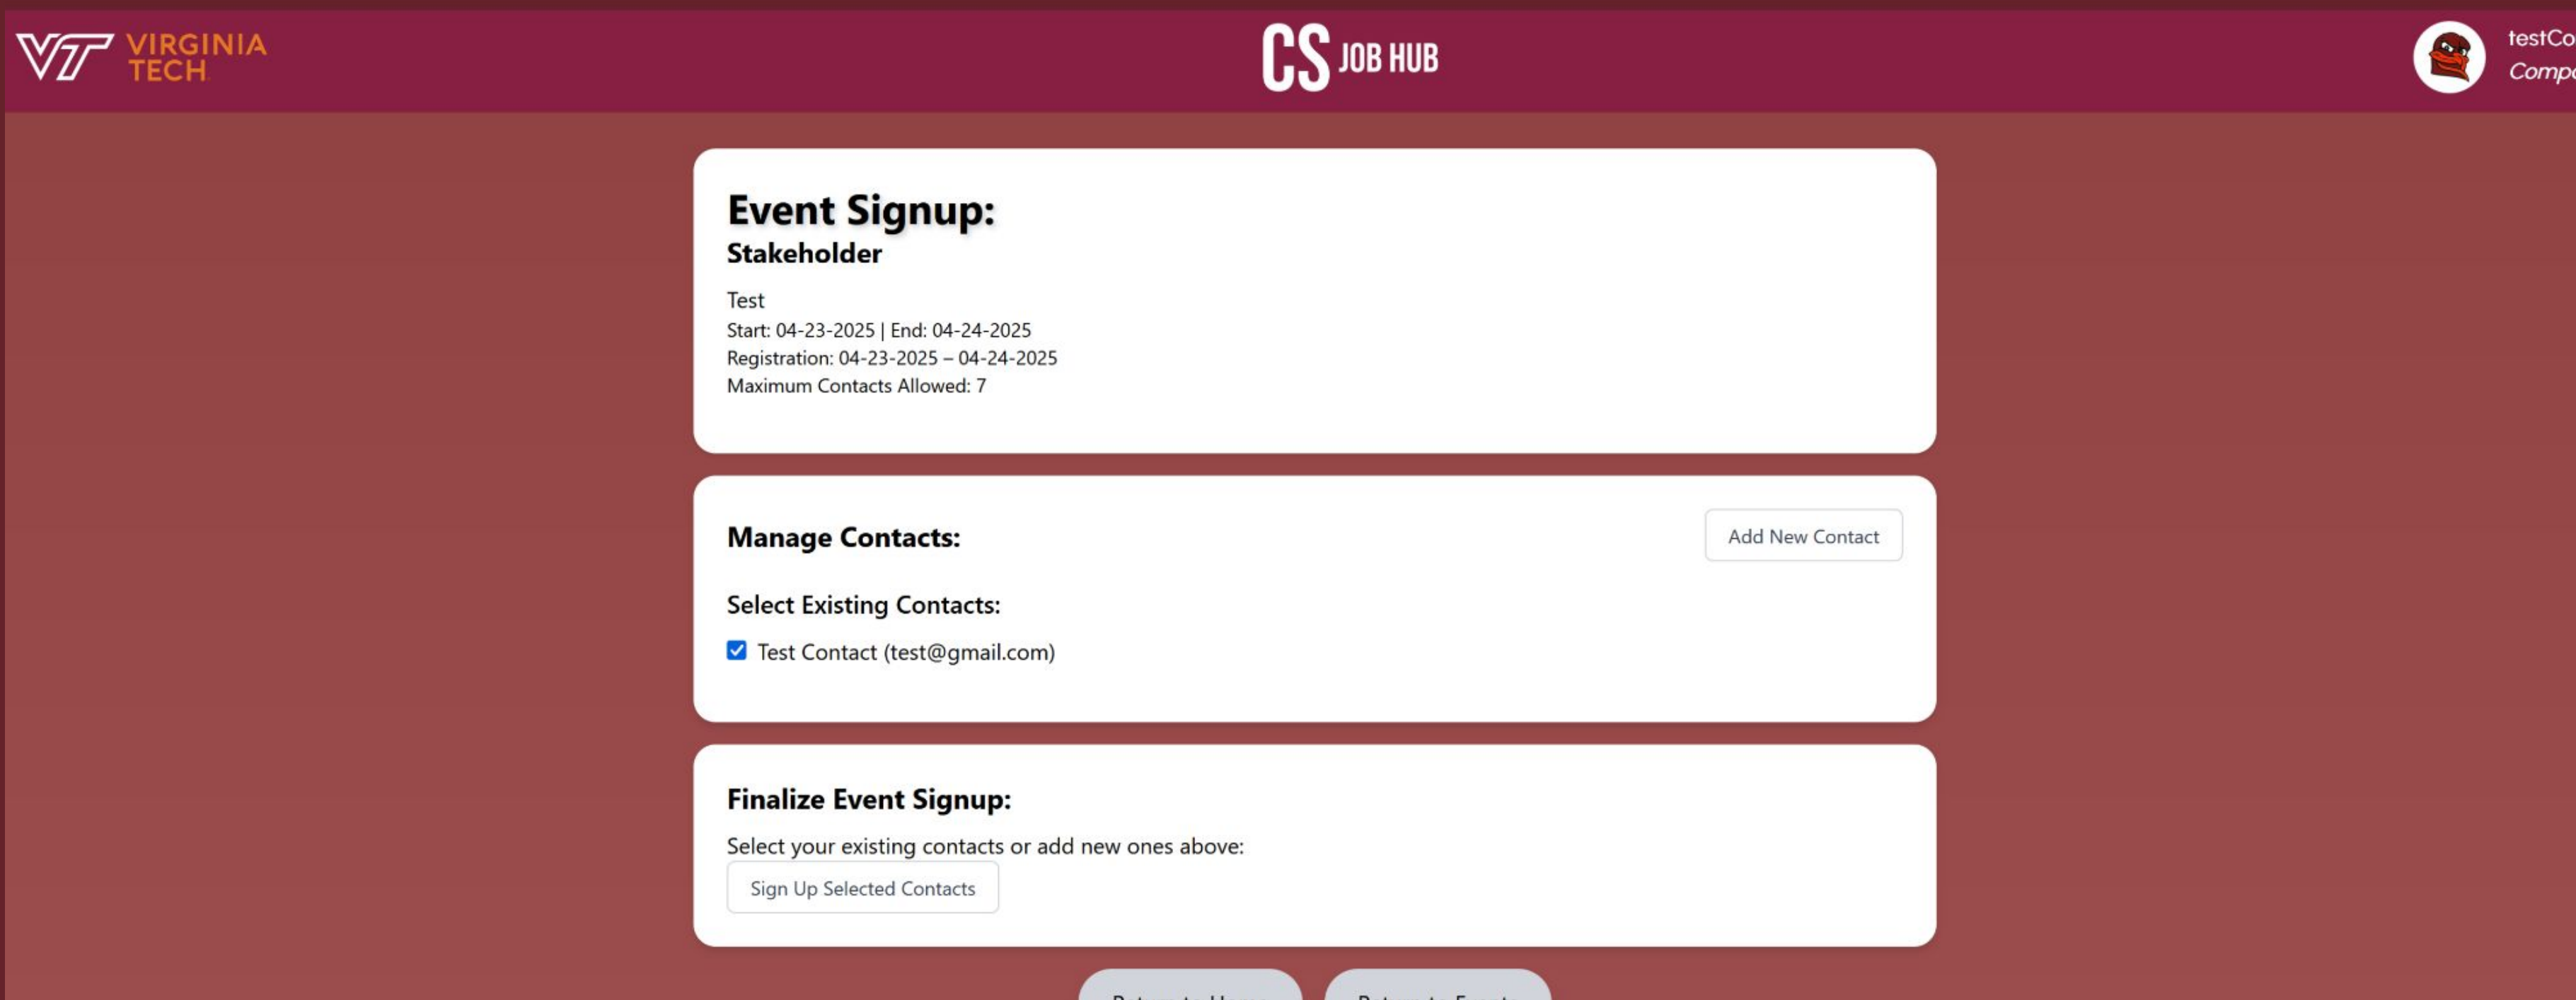

Contact Management: Employers can now add and manage contacts by entering names, emails, degrees/majors, contact types, and alumni status. These contacts are saved for future use and can be edited as needed.

Event Signup Integration: During event registration, employers can select from existing contacts or add new ones directly from the signup page. Each event displays its name, dates, and contact limits for easy planning.

Student Announcements: Employers can send announcements to students with a subject, custom message, and start/end dates. Submitted announcements appear in a dedicated view with status indicators and editing options.

Improved Employer Login Page: The login interface has been refined for clarity, featuring clean input fields, distinct register and login buttons, a password visibility toggle, and an easy-to-find "Forgot Password?" link. These additions streamline contact handling, improve event participation, and create new ways for employers to communicate with students, all in a more intuitive interface.
